GLASS BOX PROCESS

Implementing Accurate & Verifiable Elections

August 2023

Welcome!

Colorado residents are guaranteed by the state and national Constitutions "a republican form of government." That means that beginning at the smallest political division of the state, the precinct, we are to choose from among ourselves the people who will represent us at each level of government. By regaining <u>local control</u> of who is ON our ballots, who votes and CASTS those ballots, who has custody of the ballots that were cast, HOW the ballots are COUNTED, and WHO counts those ballots, we can regain control of our government.

One of the talking points used to dissuade us from regaining local control over our elections, and consequentially our government, is that "it's impossible to hand-count all those ballots."

This is a simple method of counting ballots that can be done by volunteers at the local level.

DISCLAIMER: While this method has been proven to work well, it has not been approved by any legal authority, which may be necessary prior to use in a municipality or other type of election.

Count the number of ballots being cast into the ballot box using this sheet:

TELLER JUDGES ADD TALLY SHEETS FOR RACE RESULTS

FAQs

Is the glass box balloting process best suited for only small group voting?

No, it is also very useful for much larger scale scenarios. It was recently used for an assembly which had over 400 voting attendees. The system worked very efficiently and got rave reviews from participants.

Could this process be used for a larger scale election, such as a municipal race?

Yes. There would need to be more volunteers to act as ballot counters, etc. but current vote centers already utilize volunteer poll watchers and election judges, so this should be an easy transition.

Is the glass box balloting process a lot slower than using electronic voting devices?

No, people are often surprised at how quickly the actual process goes. With the volunteer ballot counting teams working together, many ballots can be tallied in a relatively short amount of time, with the results available within minutes.

If you would like copy of this process, email Michelle at gmorgrid@gmail.com
